EDUCATION

Worcester Polytechnic Institute, Worcester, MA

Expected May 2027

B.S. in Computer Science and Robotics Engineering; Minor in Mathematics

GPA: 3.8/4.00

Coursework: Data Structures and Algorithms, Operating Systems, Computer Networks, Object-Oriented Programming, Database Systems

TECHNICAL SKILLS

Languages: Java, Python, C++, C, JavaScript/TypeScript, SQL, Go

Systems & Platforms: Linux/Unix, Git, Test Automation, REST APIs, WebSocket, CI/CD, AWS, Terraform

Frameworks & Data: FastAPI, Flask, React, Node.js, LibGDX, JHipster, PostgreSQL, MySQL, PyTorch, pandas

EXPERIENCE

Arista Networks | Software Engineer Intern

May 2026 - Aug 2026

- Implemented a Python feature that evaluates whether code changes are eligible for incremental testing and automatically schedules incremental test runs when eligible.
- Analyzed and extended a large legacy codebase, fixing defects discovered during development while preserving existing behavior.
- Handled merge scenarios so eligibility checks and incremental-test scheduling remained correct when multiple changes were combined.

FPT IS | Java Developer Intern

Jun 2025 - Aug 2025

- Built and hardened an image-upload service in a JHipster microservices environment by adding file-size validation, exception handling, and clearer REST API responses.
- Integrated the service with local object storage, reducing unnecessary storage usage by 22%.
- Contributed to service discovery and API gateway routing with a senior engineer to improve reliability for downstream services.

KPMG Vietnam | Risk Consulting Intern

Jul 2024 - Aug 2024

- Cleaned large datasets used to train an AI system that detected potential matches between client names and entities associated with illicit activities.
- Translated technical documentation, compliance guidance, and dataset descriptions to support model development and cross-team collaboration.

SELECTED PROJECTS

Repo2Resume - GoatHacks, 1st Place (40+ teams)

Tech Stack: OpenAI API, FastAPI, React, AWS, Terraform

- Built a full-stack platform that analyzes GitHub repositories and uses LLM summarization and skill extraction to generate professional resume content.
- Implemented secure GitHub OAuth and a real-time React preview; provisioned cloud infrastructure with AWS and Terraform.

LeetRoomFix

Tech Stack: JavaScript, Node.js, WebSocket, Chrome Extension

- Built an HTTP/WebSocket backend and Chrome extension supporting room creation, chat, player presence, and collaborative submission tracking.
- Detected LeetCode submissions by observing page network requests and broadcasting accepted, attempted, and completed-question status to room members.

Scrapborn (In Development)

Tech Stack: Java, LibGDX, Multiplayer Networking

- Developing the networking layer for a cooperative 2D action roguelike using a host-authoritative architecture with fixed server ticks, client input messages, and synchronized world snapshots.
- Designing LAN room discovery, client-side interpolation and reconciliation, and a shared simulation model so single-player and multiplayer use the same game logic.

LEADERSHIP

Vietnamese Student Association, WPI

Mar 2024 - Present

- Served as primary liaison at five multicultural events and coordinated materials, logistics, and funding for campus-wide outreach.
